

CENTRAL VAC

Marley Engineered Products Central

Vacuum System is suited for every type and size home including multi-level, extra-spacious designs, and homes with unusual traffic patterns. A system may be easily installed in existing structures by running tubing through closet walls or utility spaces. Floor inlets may also be installed with tubing in basements or crawl spaces

How many inlets?

Most homes require only three inlets to give satisfactory cleaning coverage. Additional inlets may be added as needed. Decide the general area where you want your inlets. Allowing for MEP's 30-ft hose length, make certain that the location chosen will allow you to clean the entire living area of your home, including closets, alcoves and far corners.

Attachment Sets.

MEP's CVS Attachment Sets provide special cleaning tools for every kind of vacuuming job. You can clean the deepest carpets, sweep floors and dust upholstery, drapes and furniture.
