

DryHandler Plus

Desiccant Dehumidifiers

From 750 to 15,000 CFM

Prevent:

- Corrosion
- Condensation
- Mold/Mildew
- Moisture Regain

A modular desiccant dehumidification system for commercial and industrial applications with unique dehumidification requirements.

Designed to produce dry air to minus 40 F dew point, the DryHandler Plus is a self-contained defined product available in fifteen incremental sizes with optional pre and post cooling modules.

- Warehouse & Storage Facilities
- Museums
- Film Storage
- Document Archives
- Military Equipment Preservation
- Laboratories & Clean Rooms
- Food Processing
- Pneumatic Conveying (Product Silos)
- Water Remediation
- Corrosion & Condensation Prevention
- Mold/Mildew Prevention
- Electronics Storage
- And many more

DryHandler Plus

A modular desiccant dehumidification system for commercial and industrial applications with unique dehumidification requirements. Industrial design offers precision humidity/temperature control. The Modular concept provides design flexibility for a wide array of options, to form a self contained, total environmental control, packaged system.

Benefits:

- Industrial design offers precision humidity control (-40°F dewpoint obtainable)
- Cost effective humidity control for lower RH setpoints
- Unique rotor seal design minimizes cross-contamination of process air stream
- Desiccant technology removes water directly from air
- Non-cyclic operation; continuous and concurrent water removal
- Long equipment life - Low maintenance costs
- Self-contained packaged system
- Improved outdoor humidity levels
- Precision humidity solutions

Features:

- Welded, unitized aluminum cabinet
- Single or double walled construction
- Advanced silica-gel rotor
- Electric, gas, or steam reactivation heaters
- Left or right hand configurations
- Optional blower configurations
- Cooling modules for CW or DX
- High efficiency filtration
